

Accelerate your research program with WCG Velos

WCG Velos increases operational efficiencies, compliance, and profit for clinical research operations

Research institutions face three main challenges:

Fragmented research operations

Compliance risks

Uncertain financial viability and oversight

WCG Velos is a clinical research management solution designed to automate and centralize financial, operational, and administrative research activities. Leading research institutions, sites, and networks use the system's integrated technology to consolidate and scale their research program, increasing profit and improving protocol and regulatory compliance.

WCG Velos Solution Differentiators:

1. Comprehensive functionality for all research and organization types eliminates therapeutic area siloes
2. One platform with two implementation options:
 - **Velos eResearch Enterprise** – A research management system (CRMS) that offers flexibility and robust architecture trusted by the leading institutions for more than 20 years; or
 - **Velos eResearch eXpress** – A clinical trials management system (CTMS) that offers research sites affordable, out-of-the box deployment.
3. Unmatched “interoperability ecosystem” that easily integrates with electronic health records, IRB, billing, data warehouse, econsent, eregulatory binder, financial, and laboratory information systems. Largest repertoire of APIs available to achieve extensibility .
4. Native integration with WCG IRB, saves additional time by submitting directly from the CTMS to the IRB.
5. Extensive experience migrating data from third party systems and paper/Excel.
6. Supports remote visits via study specific portals and patient registries.
7. Unified platform to connect and organize research networks, organizations, studies, and samples.
8. Meets standard security and regulatory requirements (e.g., 21 CFR Part 11, HIPAA).

These differentiators are driven by WCG's extensive resources, services and expertise* including support for contracts, budgets, coverage analysis, calendar entries, accounts receivable auditing, staff training/resourcing, consulting and advisory services.

*WCG supported clinical trials for 94% of all new FDA-approved therapeutic agents in 2019

Offerings natively available within WCG Velos or standalone:

Remote Patient Engagement
(Participant Portal)

Bio-specimen Management
(eSample)

WCG IRB

Review Board Management
(eCompliance)

Data Monitoring

Reports and Extracts

Electronic Data Capture (EDC)
and eSource

eConsent

Patient Registries

eXpress Site CTMS

Research Networks

Integration Engine and APIs
