

WCG ThreeWire Enrollment Assistants™

Meet Your Site Support Experts

Enrollment Assistants for Site Support:

Enrollment Assistants (EAs): EAs are highly qualified clinical research professionals who address patient identification and site bandwidth concerns head-on by serving as a study-specific, dedicated recruitment resource at your site.

Site-Customized Recruitment Plan: WCG ThreeWire develops a study-customized enrollment support strategy based on the study protocol and patient profile. We then work with your site to specifically tailor that strategy to best suit your site, taking into account factors such as the size of your patient database, your site's staffing structure, and most importantly, your study team's input.

Patient Identification and Enrollment: EAs conduct meticulous Chart Review™ with essential patient follow-up, ensuring that every potentially qualified patient at your site is identified and prescreened for the study. They can also expand recruitment beyond your site through referral physician networks and strategic community outreach.

Site Bandwidth and Recruitment Resource Support: EAs can perform vital recruitment tasks such as media referral processing, patient and caregiver education, appointment scheduling and reminder calls. They can also assist with administrative tasks such as data entry and query resolution. Their work frees your study team to focus on patient care and the conduct of the study.

The EA Effect

After 11 months, enrollment was severely behind for a Global Phase II Dermatology study. WCG ThreeWire Enrollment Assistants were brought in and deployed to relieve site burden and bring enrollment back-on-track.

20

enrollments in 11 months

Without EA Support

70

enrollments in 6 months

With EA Support

With site bandwidth increased, enrollment for this 100 patient study was reached in 17 months. Before EA support, this Phase II study was on pace to reach enrollment at 41 months.
