Eight Reasons to switch your HRPP operations to IRBNet for the successful and efficient management of research involving humans, animals and recombinant DNA.

Read on to learn the top reasons why over 2,300 research sites and review boards – and over 230,000 research professionals – rely on IRBNet.

01

Speed and Ease of Implementation

Your investigators, Board members and research administrators typically will be using IRBNet within 90-120 days – much faster than the 6-8 month time frame for most out-of-the-box software solutions. Reduce staff inefficiencies and documentation redundancies to drive compliance and productivity.

02

Security and Integrity

IRBNet is hosted at a secure, enterprise-class data center that complies with the strict requirements of all of our members, including the US Government. Nightly backups are moved off-site to fire-rated facilities.

03

Software as a Service (SaaS)

IRBNet's solution is SaaS-based, which requires no local software or hardware. Nimble and personalized to your internal work flow and SOPs, it is always available; no software is required on your local server or network, and no local IT personnel are required to keep the system running.

04

Smart Forms

With our Smart Form technology, capture only the data you need. Customize your forms to gather the data that is essential to your department's operations and utilize metrics and analytics to drive performance improvement.

www.irbnet.org

Cost-Effective

IRBNet's secure web-based application is far more affordable than the more cumbersome, less flexible solutions. And for institutions that rely on WIRB for external reviews, the technology solution may be provided at no cost.

05

World-class Customer Service

Tired of waiting for IT to respond to your requests for support, even when you're paying for it? There's no waiting with IRBNet – you have direct access to our support team, at no additional cost. IRBNet's blue-ribbon support team is the leading support team in the field.

06

Fully Integrated with WIRB

Fully integrated with Western Institutional Review Board® (WIRB) since 2012, IRBNet is the only software solution to provide unified management of both internal and external WIRB submissions.

07

Supports Compliance Programs

In addition to our integration with WIRB, IRBNet also allows you to manage your institutional compliance programs such as Enterprise Conflict of Interest (COI), Institutional Animal Care and Use Committee (IACUC), Biosafety (IBC), your Training & Credential Management, and other institutional research functions.
