

Case Study

How We've Helped - Media and Chart Review

PHASE II ARTHRITIS DRUG - US AND EUROPE

Challenge

Meet the one year enrollment timeline for this **216 patient study**. When ThreeWire was engaged, total enrollment stood at only 70 patients after six months.

Solution

ThreeWire implemented **media outreach** in the US and Canada, as well as **ThreeWire Chart Review services™** at selected sites in Europe, Canada and the US. Media patients were prescreened by our Patient Interaction Center® and referred to sites. Chart review candidates were contacted by telephone and/or letter for prescreening.

Results

Seventeen percent of media responses were referred to sites and more than 5% of referrals were randomized, yielding 45 enrollments. More than 800 candidates were identified during chart reviews, yielding 26 enrollments. **ThreeWire produced 71 total randomizations** and study **enrollment was completed one month ahead of schedule**.
