

Case Study

How We've Helped - Chart Review

PHASE II ARTHRITIS DRUG - US AND EUROPE

Challenge

Launch the project at an investigator meeting in Europe ten days after contract signing. Complete as many randomizations as possible in this **140-subject study** with extremely narrow inclusion criteria by using only "in-practice" patients within the sites' databases or that of their referring physicians.

Solution

Implemented our **ThreeWire Chart Review™** services at selected sites in eastern and western Europe, UK, Canada and the US. Candidates identified were contacted either via telephone or letter and offered the opportunity to screen for the study.

Results

Thousands of patient charts were reviewed to identify over 300 potential participants. Approximately 180 were evaluated for suitability for site screening, resulting in 50 site screening visits and **35 randomizations**. **Project completed in 90 days.**

*"I have to say,
you sure have
a great team
at ThreeWire!
Everyone should
be so lucky!"*
