

# Case Study

## How We've Helped - Chart Review

### PHASE II OAB DRUG - EUROPE

#### Challenge

**Jump start enrollment** at a small number of key sites in order to generate momentum for quickly enrolling the initial patient group needed for a subsequent interim data analysis.

#### Solution

Implemented our **ThreeWire Chart Review™** services at three selected sites with key investigators that would stimulate activity at other sites.

#### Results

Within a one-week period at each site, reviewed a total of 1,420 charts. Of this total, 1,329 passed Chart Review screening criteria, 741 were subsequently referred to sites, and a total of **9 patients were enrolled**.

*"This was the first opportunity for <Sponsor> to work with a patient recruitment vendor, and we are confident that our choice of ThreeWire was correct."*
