

# What if You Could Quickly Identify and Engage Qualified, Available Sites?

**Expand your access and engage the right clinical trial sites – faster.** WCG offers sponsors and CROs a Site Network of independent sites and community hospitals performing research in virtually every therapeutic area – including pain, vaccine, COVID, NASH, metabolic, CNS, and oncology trials. You instantly gain access to 270+ sites and 1,100+ PIs eager to conduct your clinical trials.

**What if the service were fast, full-service and complimentary?** We determine potential site matches using your feasibility questionnaire and protocol summary. You receive access to qualified and interested sites during your site selection process, and you choose the best match.

Your WCG project manager then provides a single point of contact – expediting study start-up timelines and managing feasibility, budgeting and contracting. We can also assist with patient recruitment, if requested. An individual accounting manager handles all site payments. **You gain an entire network of new trial sites while streamlining study start-up – at no cost.**

## WCG SITE NETWORK SERVICES INCLUDE:

- One contract template and budget used across all sites, if desired
- Access to experienced sites based on feasibility and protocol
- Single point of contact to provide a report of qualified and available sites to assist with bid defense and/or site selection
- Single point of contact for budgeting and contracting on behalf of all sites
- Patient recruitment, if requested
- Individual accounting manager for site payments

**Sponsor and CRO clients tell us that the WCG Site Network offers expert partnership, giving them expansive site access and the ability to perform hundreds of successful clinical trials every year – faster and more efficiently – via this streamlined process.**

**WCG has been a trusted partner in advancing clinical trial success for over 50 years. We offer deep experience plus fresh insights to accelerate research programs.**

270+

**independent sites and community hospitals in the U.S. and Puerto Rico, including 1,100+ PIs.**
