Ensure continuity of data collection and maintain the scientific integrity of your study with Remote Assessments

In response to COVID-19, many sponsors have switched from in-clinic visits to remote assessments of subjects, allowing them to complete ongoing clinical trials without undue delay. This transition has prompted concerns about the reliability of patient-reported and clinician-reported data.

WCG's Remote Assessments address these concerns by providing access to a secure video conferencing service to allow sites to continue assessing subjects visually via the web. Any such service must be privacy-compliant and be user-friendly. Ours is both.

Most patients and clinicians routinely use smartphones, smart TVs, and other sophisticated technology every day. WCG's Remote Assessments use such devices to capture vital outcomes and administer scientifically validated, HIPAA-compliant scales via phone and/or video.

The First Step in Continuously Protecting Study Endpoints

Easy-to-implement solution

HIPAA- and GDPR-compliant

Encrypted connection

1
Remote Assessment Design & Validation
Allow raters and clinicians to perform assessments remotely while patients are at home

2
eCOA/ePRO Development & Deployment
Capture and maintain the quality of your patient- and clinician-reported outcomes

4
Intervention-Based Site & Patient Training
Deploy essential remediations when human error may impact your study

3
Continuous Analysis & Anomaly Detection
Pinpoint and analyze anomalies in clinical trial data collected remotely or on site
