

Save 456 Days in IRB Review With a Seamless, Coordinated Submission Process

WCG IRB has contractual relationships with over 3,400 academic medical centers, hospitals and research institutions. Our partners in clinical research leverage this network to efficiently drive submission and review activity, and streamline trial activation. In the example below, we examine a study that did not leverage that centralized network, and show the comparative benefits if the study had leveraged WCG IRB for streamlined review and centralized process.

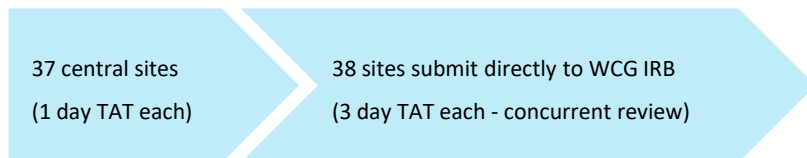

Example: Phase III Oncology Study

This study was conducted without using the WCG IRB central submission process, adding significantly to their IRB review turnaround time (TAT):

Total TAT - 607 days

Total TAT - 151 days

456

days could have been saved eliminating redundant protocol review.

1

IRB to oversee all of your institutions and private practice sites.
