

WCG CRC Support Identifies 700+ Participants & Streamlines EDC Entry

OVERVIEW

A top 5 sponsor partnered with WCG to support their Phase IIb and Phase III cardiovascular clinical trials. These studies spanned 170 sites across the United States and Canada, presenting complex operational and recruitment challenges due to strict eligibility criteria, and specialized data gathering.

SOLUTION

WCG deployed our Clinical Research Coordinators (CRCs) across participating sites to deliver end-to-end support throughout the participant journey. This included conducting chart reviews and pre-screenings to identify eligible candidates, managing appointment scheduling and reminders to optimize participation. Additionally, CRCs ensured accurate data entry and prompt query resolution to uphold data quality standards.

RESULTS

Sites achieved faster participant enrollment and seamless EDC entry, leading to significantly reduced onboarding times and an accelerated study startup. With WCG CRC support, research milestones were reached earlier and overall trial efficiency improved.
