

Trial IntelX™

Powered by ClinSphere™

Redefining Clinical
Trial Design

Knowing changes everything in clinical trial design. Trial IntelX™ is the predictive intelligence platform that simulates design scenarios, reduces amendments, and pinpoints top-performing countries and sites with confidence. Its AI-powered planning and forecasting predicts enrollment, timelines, and burden — all grounded in a powerful, proprietary protocol and performance dataset.

What is Trial IntelX?

Unparalleled Trial Intelligence Data

Our protocol- and operational performance-benchmarked trial dataset is unmatched. Activate it in Trial IntelX for turnkey insights, or license the data directly to integrate into your own systems and train internal models.

Trial IntelX

AI-Powered Tool

Trial IntelX is an easy-to-use, AI-powered tool that ingests WCG's trial intelligence data and applies advanced algorithms to generate decision-ready guidance — helping teams reduce patient and site burden, select the best sites and optimize enrollment.

Expert Consulting & Partnership

WCG experts dive deep on customers' specific needs to help interpret insights, pressure-test decisions and guide action from early design strategy through execution planning.

Why is Trial IntelX different?

The breadth and depth of our data is unequalled in the industry, and our mix of AI, paired with human expert validation and data standardization, enables powerful benchmarking and insights.

43k+ operational performance-
benchmarked trials

80k+ complete protocols

125+

operational performance metrics tracked across geographies, sites and PIs, including:

- Enrollment rate
- Screen failure rate
- Time to site initiation
- Total cycle timelines

100+

metrics extracted and standardized by indication, including:

- I/E criteria
- Endpoints
- Objectives
- Procedures
- Schedule of assessments

Ready to redefine how you design clinical trials?
