

ClinSphere Trial IntelX™

Redefining Clinical Trial Design

Knowing changes everything in clinical trial design. ClinSphere Trial IntelX™ is the predictive intelligence platform that allows you to know more sooner, providing the objective data to help sponsors optimize trials before they begin. Discover what Trial IntelX is and why it is different.

What is Trial IntelX?

ClinSphere Trial IntelX

Unparalleled Trial Intelligence Data

Our protocol- and operational performance-benchmarked trial dataset is unmatched. Activate it in Trial IntelX for turnkey insights, or license the data directly to integrate into your own systems and train internal models.

Easy-to-Use, AI-Powered Tool

Trial IntelX is an easy-to-use, AI-powered tool that ingests WCG's trial intelligence data and applies advanced algorithms to generate decision-ready guidance – helping teams reduce patient and site burden, select the best sites and optimize enrollment.

Expert Consulting & Partnership

WCG experts dive deep on customers' specific needs to help interpret insights, pressure-test decisions and guide action from early design strategy through execution planning.

Why is Trial IntelX different?

The breadth and depth of our data is unequalled in the industry, and our mix of AI, paired with human expert validation and data standardization, enables powerful benchmarking and insights.

40k+ operational performance-
benchmarked trials

80k+ complete protocols

125+

operational performance metrics tracked across geographies, sites and PIs, including:

- Enrollment rate
- Screen failure rate
- Time to site initiation
- Total cycle timelines

100+

metrics extracted and standardized by indication, including:

- I/E criteria
- Endpoints
- Objectives
- Procedures
- Schedule of assessments
